### EXAM INSTRUCTIONS

Read the following instructions carefully before you start the exam.

- Make sure you get **the right number of pages** mentioned on the first page.
- The exam is divided into **THREE SECTIONS** scored out of **100 points**.
  - Section I: Reading Comprehension (20 pts)
  - Section II: Language (60 pts)
  - Section III: Writing (20 pts)
- This exam consists of multiple choice questions **ONLY**.
- Every single question has four options (A, B, C or D). **Only** one option is correct.
- You must answer on a separate **ANSWER SHEET**.
- Every candidate has the right to **ONE** answer sheet **ONLY**.
- Only a **black** or **blue** pen is allowed to mark the answer you choose for each question.
- **Cross** ☒ or **shade** ■ the right letter on the answer sheet.
- Crossing out answers and/or using a correction pen is **NOT ACCEPTED**.
- No document, electronic device or communication with anyone is allowed. Evidence of cheating during the test administration will automatically disqualify the candidate.

**SECTION I: READING COMPREHENSION (20 pts; 1 pt each)****READ THE FOLLOWING TEXT AND DO THE RELATED TASKS.**

[1] Over recent years, the educational goals, curricula and student profiles of countries and jurisdictions have increasingly embraced a “whole child” perspective, looking comprehensively at dimensions of knowledge, skills, attitudes and values jointly with the well-being of students. Discussions on learning goals and student profiles also take place at the international level, as illustrated in the co-creation of the Organization for Economic Co-operation and Development (OECD) Learning Compass 2030. Over the last four years, governments, representatives from OECD’s Trade Union Advisory Council, teachers, school leaders, teacher educators, students, non-governmental organizations, private enterprises and other stakeholders in civil society have come together to outline a future vision for education, reaffirming broader goals of education and students’ multi-dimensional successes in both learning and well-being.

[2] The process of establishing learning goals can be as important as the product. The road of curriculum design and implementation is littered with many good ideas that were poorly implemented. The laws, regulations, structures and institutions on which educational goals and curricula are established are just the small visible tip of the iceberg. The reason why it is so hard to advance implementation is that there is a much larger invisible part under the waterline. This invisible part is composed of the interests, beliefs, motivations and fears of those involved in education, teachers included. This is where unexpected collisions occur because this part of educational reform is rarely captured on the radar screen of public policy. Policy makers reform education successfully when they help people recognize what needs to change and build a shared understanding and collective ownership for change. They must focus resources, build capacity, and create the right policy climate with accountability measures designed to encourage innovation and development rather than compliance. Because of education systems’ vast structure of established providers and extensive vested interests, reform is often accompanied by loss of advantages or privileged positions. Furthermore, parents often become anxious that their children are no longer learning things that were important to them, or when their children learn things they themselves as parents no longer understand. As a result, the status quo has many protectors – stakeholders in education who stand or perceive to lose if changes are made. Add to this the asymmetry between the costs and benefits of change: costs are immediate and certain while there is uncertainty about who will benefit from change.

[3] At the same time, there has been important progress in this field in the last few years. While governments and teacher organizations often sit at opposite sides of the negotiation table, they are increasingly coming together over the vision and design of the education system and related learning goals. Often this includes public consultations or discussions on educational goals or curricula. Engaging key stakeholders, especially teachers, in envisioning desired student outcomes is key to making the vision a reality. Properly designed stakeholder engagement helps ensure that the voices of learners, educators, parents and communities are heard. This builds capacity for curriculum implementation more efficiently. When stakeholders strongly buy into the vision they have sketched out together, it can become a powerful tool to inspire schools, communities, and the education system to achieve the desired outcomes for all learners. Strategic foresight, careful planning and consultative and collaborative processes take time but they contribute to more sustainable and successful results.

[4] Setting learning goals that go beyond current practice can be met with resistance from stakeholders. Resistance to change may be especially strong among teachers when the nature of the change is unfamiliar and the consequences on their teaching are unclear. Several jurisdictions in OECD's Education 2030 program report that a lack of teacher buy-in for curriculum reform, manifested as skepticism or doubt about reform (as in Korea and Poland), fear of change (as in Ireland), and personal beliefs or attitudes that conflict with a new curricular direction (as in Singapore) can present barriers to effective and timely curriculum implementation. Implementation can be impeded by teachers' attitudes and beliefs on the subject, their own teaching styles and practices and also by a lack of lead time for teachers to acquaint themselves with the revised curriculum. Such resistance is often due to a fear of the unknown, with teachers reporting being ill-equipped for such change. Teacher training programs and guidance materials can also be misaligned with new curriculum directions, adding to resistance. Teachers especially fear making mistakes in implementing the new curriculum. This can mean that they continue to teach in a traditional way and students potentially miss out on opportunities to develop future-oriented skills. Awareness-raising campaigns and inspirational leadership can help motivate teachers for change. Teachers also need to be reassured that the goal of change is attainable and that sufficient support will be provided throughout the implementation process.

[5] The use of digital technologies can make learning more granular, more adaptive, and more interactive. Digital technologies also enable content, pedagogies and assessments to be better integrated. For example, when digital learning environments facilitate learning, they can also provide positive feedback that helps teachers detect biases. Learning analytics can help teachers manage their classes both in real time during teaching and as a reflective tool afterwards by supporting professional learning and suggesting solutions to ensure better student engagement. However, technology can also contribute to some teachers surrendering decisions regarding curriculum content, pedagogies and assessments to technology. This can then create dependence and diminish teachers' agency. The best answer to this is to engage teachers in the design of such digital solutions rather than confront them with implementation.

[6] While acknowledging that transformational change is essential to keep curriculum content relevant to social demands, jurisdictions reported that there are significant challenges involved in "getting it right". Some jurisdictions surveyed by the Education 2030 project resorted to less burdensome incremental changes by revising curriculum/guidelines partially and on demand. This emphasizes the importance of "small wins" in reform implementation. Others create space in the curriculum from the onset to accommodate new changes rapidly. However, jurisdictions have also reported that incremental changes often result in a patchwork curriculum with possible time lags before achieving tangible impact. Creating space in the curriculum should also be handled with caution so as not to provoke curriculum overload by adding more instruction time and/or creating incoherence across grades and learning areas. Maintaining a balance between a transformational whole-system change and speedier "on demand" incremental changes keeps curriculum reforms moving forward in a meaningful and efficient manner, and contains the time lag while gradually incorporating the competencies and skills needed for the future.

[7] Reform fatigue resulting from too-frequent changes and adjustments to learning goals and curricula often leads to stakeholders becoming less engaged over time. It also builds up resistance to change in the long run. Reform fatigue may be particularly pertinent if curriculum changes are implemented before previous reforms have been embedded into practice, or if teachers are faced with contradictory reforms in a relatively short period of time. Jurisdictions in OECD's Education 2030 program reported being confronted with teachers ignoring reforms, just doing the minimum, or reinforcing old processes, methods and content. However, when opting for more continuity and stability (i.e. regular cyclical curriculum reforms instead of periodical curriculum renewals), they found that curriculum change was insufficiently responsive to the pace of change in society.

[8] The shift towards digital curricula can be an efficient solution to reduce cost and time associated with curriculum redesign. This is especially so because it eliminates the back and forth of printing and reprinting hard copies when changes are made. A digital curriculum reduces costs and makes it possible to adjust curriculum content as needed in an iterative manner as well as to give teachers greater agency in how they engage with the content. However, one unintended consequence reported by jurisdictions is that the more easily amendable format can lead to frequent alterations by curriculum developers and e-curriculum managers. This is very frustrating for teachers as they are exposed to constant adjustments with additional, altered or superseded content, contributing to reform frustration. Caution is also necessary when modernizing curriculum content to keep up with new societal developments. Given how quickly views and values in society change, the curriculum can easily end up with redundant references to specific issues, events and tools. To avoid this, it is crucial for curriculum to focus on core concepts that are valued across disciplines, as well as on key concepts that endure over time. With a shift to a digital curriculum, there is also a need to invest in stronger cyber security, not only tackling the technological security aspects of the hardware and software used, but building a culture of security among the end-users of the digital space (teachers, students, principals and parents).
